

SEPARATE AND CONCENTRATE - TRANSPORT - DESTROY

PFAS DESTRUCTION TAILORED TO YOUR NEEDS

Remove PFAS in Contaminated Waters with a
Closed-Loop Solution

NO LONGER FOREVER CHEMICALS

Nothing is forever with the 4never™ PFAS destruction solution. We use proven and emerging PFAS destruction technologies to ensure optimal results. The PFAS hyper-concentrate, generated through the PFAS separation and concentration process of SAFF® technology, is delivered to a Crystal Clean facility to undergo ultimate destruction using a destruction method tailored to your specific needs.

MEETING YOUR BUSINESS & SUSTAINABILITY GOALS

As part of the 4never™ process, our team consults with you to understand what your priorities are to determine a plan that meets both your business and sustainability goals. The destruction method used is determined by the unique chemistry makeup of your water, and 4never™ will provide the destruction method best suited to meet your goals. Once the PFAS destruction is completed, 4never™ will provide a report documenting the PFAS removal and destruction process to ensure your regulatory compliance.

A UNIQUE HANDS-OFF SOLUTION

4never™ is a sustainable, tailored, and cost-effective solution that both removes your PFAS problem and gives you a hands-off, turnkey solution completely managed by Crystal Clean. Crystal Clean owns and operates all equipment on your behalf, removing distractions from your business. 4never™ operates on a hub and spoke model, allowing for nationwide distribution and use.

THE 4NEVER™ PROCESS

SEPARATE AND CONCENTRATE

SAFF® units are placed onsite to separate PFAS from wastewater, creating a PFAS hyper-concentrate. Contaminated waters may also be collected in bulk.

TRANSPORT

4never™ transports the PFAS concentrate to its final destination at a regional facility ready for destruction.

DESTROY

The PFAS concentrate is destroyed using proven and emerging technologies tailored to your specific needs and sustainability goals.
