

SEPARATE AND CONCENTRATE - TRANSPORT - DESTROY

Permanently Remove PFAS From Contaminated Waters

4never™ is a sustainable, cost-effective solution for the private landfill and industrial waste markets that permanently removes PFAS from contaminated waters and breaks it down into basic nontoxic elements, resulting in no polluting byproducts.

HOW IT WORKS

4never™ unites the proven technologies of SAFF® with established and emerging PFAS destruction methods for a closed-loop PFAS solution. 4never™'s PFAS solution results in better outcomes for businesses, employees, communities, and most importantly, the environment.

SEPARATE AND CONCENTRATE

EPOC SAFF® units are placed onsite to separate PFAS from wastewater, creating a PFAS concentrate.

TRANSPORT

4never™ transports the PFAS concentrate to its final destination at a regional facility ready for destruction.

DESTROY

The PFAS concentrate is destroyed using proven and emerging technologies tailored to your specific needs and sustainability goals.

ABOUT 4NEVER™

Crystal Clean is the exclusive distributor and operator of 4never™ to the private landfill and industrial waste treatment markets, serving clients through its nationwide network of branches and waste treatment facilities.

4never™ combines the power of Surface Active Foam Fractionation (SAFF®) technology, exclusively distributed by Allonnia in North America and manufactured by EPOC Enviro, with proven and emerging destruction methods to provide a local, scalable, closed loop solution to remove and permanently destroy PFAS.
